

to build a skill matrix match app, some mockup sap consultant cvs are needed

Completed 2 steps

Here are **5 diverse mock SAP consultant CVs** generated as a structured JSON file, ready for your skill matrix matching app .

Profiles Overview

ID	Name	Specialization	Experience	Key Skill Areas
CV001	Markus Berger	SAP FICO	12 years	FI, CO, S/4HANA Finance, BPC
CV002	Priya Nair	HCM / SuccessFactors	8 years	EC, Payroll, IAS/IPS, SCIM, SAML
CV003	Jan Kowalski	BW/4HANA & Analytics	10 years	BW, Datasphere, SAC, Snowflake
CV004	Sophie Müller	SD / MM (Junior)	3 years	SD, MM, S/4HANA Procurement, Fiori
CV005	Carlos Mendes	Basis / BTP Architect	15 years	Basis, BTP, HANA, RISE, CI/CD

JSON Structure per CV

Each CV object contains these fields, designed for easy skill extraction:

`id` , `name` , `title` , `years_experience` , `location` , `languages` — basic metadata for filtering

`skills` — categorized object with sub-arrays: `SAP`

`Modules` , `Technical` , `Project/Architecture` , `Tools`

`certifications` — official SAP cert names for exact matching

`experience` — array of roles with `highlights` (project-level achievements)

`education` & `summary` — for NLP-based soft skill extraction

Tips for Your Skill Matrix App

The **skills object is categorized** intentionally — you can match at module level (e.g., `SAP BW`) or at category level (e.g., all `Technical` skills)

CV002 (Priya) intentionally overlaps with your IAS/IPS/SCIM domain, great for testing identity management skill extraction

CV003 (Jan) covers Datasphere + Snowflake — useful for testing cross-platform skill normalization

For a richer test set, you can duplicate and vary `years_experience` and remove/add skills to simulate skill gaps

Would you like me to also generate a **CSV version** of the skill matrix (consultants × skills with proficiency levels), or add more CVs covering areas like SAP MM/PP, ABAP Development, or SAP Ariba?

Prepared using Claude Sonnet 4.6

make it 20 profiles, also add add additional sap modules as skill such as fi/co, MM, EWM, IBP

Completed 1 step

Here are all **20 mock SAP consultant CVs** as a structured JSON file . Each profile has between 16–24 skills and covers a distinct SAP specialization.

Profiles at a Glance

ID	Name	Specialization	Exp	Key SAP Modules
CV001	Markus Berger	FICO	12y	FI, CO, S/4HANA Finance, BPC, FI-AA
CV002	Priya Nair	HCM / SuccessFactors	8y	HCM, EC, Payroll, IAS, IPS
CV003	Jan Kowalski	BW/4HANA & Analytics	10y	BW, BW/4HANA, Datasphere, SAC
CV004	Sophie Müller	SD / MM (Junior)	3y	SD, MM, S/4HANA Procurement
CV005	Carlos Mendes	Basis & BTP Architect	15y	Basis, BTP, HANA, Web Dispatcher
CV006	Elena Hoffmann	MM / EWM	9y	MM, EWM, WM, S/4HANA Procurement
CV007	Liam O'Brien	IBP / APO	11y	IBP, APO (DP/SNP/PPDS), MM, SD
CV008	Fatima Al-Rashid	PP / QM	7y	PP, QM, MM, PM, S/4HANA Mfg
CV009	Thomas Baumann	ABAP / Fiori Developer	10y	ABAP, Fiori/UI5, RAP, BTP CAP
CV010	Anika Svensson	Ariba / Procurement	6y	Ariba, MM, S/4HANA Procurement, SRM
CV011	Rafael Santos	TM / EWM	8y	TM, EWM, MM, SD, GTS
CV012	Yuki Tanaka	PS / PPM	9y	PS, PPM, FI, CO (WBS), MM
CV013	Ingrid Larsen	GRC / Security	11y	GRC AC, GRC PC, IAG, IAS
CV014	David Kim	Integration Suite / CPI	7y	CPI, API Mgmt, Event Mesh, BTP
CV015	Maria Rossi	Finance Transformation	14y	FI, CO, Central Finance, Group Reporting
CV016	Andrei Popescu	PM / Asset Management	8y	PM, S/4HANA Asset Mgmt, AIN, MM MRO
CV017	Nathalie Dubois	Datasphere & SAC Planning	5y	Datasphere, SAC, HANA Cloud, BTP
CV018	Omar Hassan	SD / CRM / Sales Cloud	9y	SD, CRM, C4C, Service Cloud
CV019	Lukas Bauer	MM / SRM / CLM	13y	MM, SRM, CLM, Ariba Contracts
CV020	Chen Wei	Supply Chain Architect	16y	IBP, EWM, TM, MM, SD, PP, GTS

Skill Coverage Highlights

The dataset intentionally covers overlapping modules to test matching nuance — for example, **MM** appears across CV004, CV006, CV007, CV008, CV010, CV011, CV019, and CV020 at varying depths (pure MM, MM-MRO, MM as integration). Similarly, **EWM** is primary for CV006 and CV011 but secondary for CV020, which is useful for testing proficiency-level ranking.

The JSON `skills` object is split into 4 categories per profile: `SAP Modules` , `Technical` , a domain-specific category (e.g., `Planning` , `Logistics` , `Compliance`), and `Tools` — making it straightforward to build both exact-match and fuzzy skill scoring logic.

Would you like me to also generate a **skill matrix CSV** (consultants × normalized skills with proficiency scores 1–4), or export the data in a flat format optimized for a specific framework (e.g., pandas DataFrame, LangChain document chunks for RAG)?

Prepared using Claude Sonnet 4.6

now, generate tenders matching some of those skills. this will be used to develop a skill 2 tender ai llm app.

Completed 1 step

Here are **20 realistic SAP tenders** as a structured JSON file , each pre-linked to matching consultant profiles from your CV dataset.

Tender Overview

ID	Title	Industry	Duration	Matched Profiles
TND001	S/4HANA Finance & Controlling	Financial Services	12 months	CV001, CV015
TND002	IBP Demand & Supply Planning Rollout	FMCG	18 months	CV007, CV020
TND003	EWM Implementation	Logistics / 3PL	10 months	CV006, CV011, CV020
TND004	SuccessFactors EC & IAS/IPS Setup	Financial Services	9 months	CV002
TND005	BW/4HANA → Datasphere Migration	Transportation	14 months	CV003, CV017
TND006	Ariba Source-to-Pay Transformation	Telecom	15 months	CV010, CV019
TND007	GRC Access Control & Security	Insurance	8 months	CV013
TND008	Integration Suite PI/PO → CPI Migration	Healthcare	12 months	CV014
TND009	PP / QM Process Manufacturing	Chemical	11 months	CV008
TND010	ABAP / RAP Custom Development	Automotive	24 months	CV009
TND011	Basis & RISE with SAP Migration	Consumer Goods	16 months	CV005
TND012	Central Finance Hub & Group Reporting	Energy	20 months	CV015, CV001
TND013	Transportation Management Carrier Integration	Freight	10 months	CV011, CV020

--

ID	Title	Industry	Duration	Matched Profiles
TND014	PM / AIN Predictive Maintenance	Oil & Gas	12 months	CV016
TND015	SD / Sales Cloud Omnichannel	Beauty / Retail	10 months	CV018
TND016	PS / Project Systems – Capital Projects	Utilities	12 months	CV012
TND017	MM / EWM / IBP Supply Chain Transformation	Automotive	24 months	CV020, CV007, CV006
TND018	Datasphere & Business Data Cloud – Banking	Banking	12 months	CV017, CV003
TND019	MM / CLM Procurement Rollout	Insurance	9 months	CV019
TND020	S/4HANA Greenfield Full Suite (SME)	HVAC	18 months	CV001, CV004, CV006, CV020

JSON Structure per Tender

Each tender object includes these fields, designed for LLM skill extraction and matching :

`required_skills` — split into `mandatory` (hard filters) and `optional` (score boosters), ideal for a two-pass LLM matching strategy

`matching_profiles` — ground-truth labels for evaluating your model's ranking accuracy

`seniority` & `team_size` — enable multi-constraint matching beyond pure skill overlap

`description` — free-text field suitable for embedding-based semantic matching via RAG

`languages` , `location` , `contract_type` — metadata filters for pre-screening

Suggested AI App Matching Architecture

For your Skill-to-Tender LLM app, a solid approach would be:

- . **Pre-filter** on languages , location , seniority (hard rules)
- . **Keyword match** on mandatory skills against CV SAP Modules (recall layer)
- . **Semantic embedding match** on tender description vs CV summary + experience.highlights (RAG/cosine similarity)
- . **LLM re-rank** using a prompt with both CV and tender JSON to generate an explainable fit score and gap analysis
- . Use matching_profiles as **ground-truth** for evaluation / fine-tuning

Would you like me to generate a **combined dataset** (CVs + tenders in one file), a **skill-overlap matrix CSV**, or a starter **Python matching script** using cosine similarity or OpenAI embeddings?

Prepared using Claude Sonnet 4.6

a skill-overlap matrix CSV

Completed 3 steps

skill_overlap_matrix

cv_id	consultant_name	consultant_title	years_experience	tender_id	tender_title
CV001	Markus Berger	Senior SAP FICO Consultant	12	TND001	S/4HANA Finance & Controlling Implementation
CV001	Markus Berger	Senior SAP FICO Consultant	12	TND002	SAP IBP Demand & Supply Planning Rollout
CV001	Markus Berger	Senior SAP FICO Consultant	12	TND003	Extended Warehouse Management (EWM) Implementation
CV001	Markus Berger	Senior SAP FICO Consultant	12	TND004	SAP SuccessFactors Employee & IAS/IPS Setup

Best Match Per Tender
Chart

Skill Overlap Heatmap

Chart

The skill overlap matrix CSV is ready , along with two visualizations.

Skill Overlap Matrix — Structure

The CSV contains **400 rows** (20 consultants × 20 tenders) with these 17 columns :

Column	Description
cv_id / tender_id	Link keys to your JSON files
mandatory_skills_matched	Count of hard-required skills found in CV
mandatory_match_pct	% of mandatory skills covered (key filter)
optional_skills_matched	Bonus skills matched
weighted_fit_score	Composite score: mandatory skills count double
matched_mandatory_skills	Semicolon-separated list of exact matches
matched_optional_skills	Bonus matches for explainability
ground_truth_match	True/False — your labeled evaluation set

Matching Quality

The heatmap shows clean diagonal-like clustering — most high scores concentrate where specialist profiles align with their domain tenders. The scoring uses **fuzzy substring matching** (e.g., "SAP MM (MRO)" in a CV matches "SAP MM" in a tender), which mimics how an LLM would extract and normalize skill tokens.

Generated chart: skill_overlap_heatmap.png

Every tender's top-ranked consultant is a confirmed ground-truth match — 20/20 correct top picks — giving you a solid keyword baseline to beat or complement with semantic embedding scoring.

Scoring Formula Used

The `weighted_fit_score` is calculated as:

$$\text{score} = \frac{2 \times \text{mandatory_matched} + \text{optional_matched}}{2 \times \text{mandatory_total} + \text{optional_total}} \times 100$$

This gives mandatory skills twice the weight of optional ones, which you can tune as a hyperparameter in your LLM app's ranking layer.

Would you like a **starter Python matching script** next that uses this CSV as the ground-truth baseline and adds a semantic similarity layer via sentence embeddings?
